

*HYDRA X for Process
Provisioning Logistics*

HYDRA X

Do you implement your **staging planning** efficiently and have an **overview** of all material buffers and movements at all times?

Motivation

"Large buffer areas can quickly become confusing. It's difficult to find the right batches."

"We often wait for a certain raw material because it has to be heat-treated before it can be made available."

"Transport orders only exist in the form of a paper list that the employee ticks off. Only they know which raw materials or packaging materials are still missing."

"Coordination during provision is done by telephone or laborious running back and forth."

Your Issue

- Plan your material provision using MES and use it to **link** orders, components and associated production equipment.
- Maintain an **overview** of the best-before dates and waiting times of individual materials in order to execute transport orders at the right time.
- Record all flows of goods **centrally in one system**, clearly arranged, in real time and traceable at all times.

Our Solution

With the mApps of HYDRA X for Process category Provisioning Logistics you can ...

- ...carry out staging planning with allocation of components & equipment.
- ...plan material-related staging across several orders or approaches.
- ...manage, execute and automatically confirm transport orders.
- ...monitor and control staging buffers and material movements.
- ...manage and monitor minimum shelf life and minimum waiting times.

HYDRA X for Process Provisioning Logistics

- Efficient control and optimization of movement and intermediate storage of material in production
- Minimize inefficient transport routes and avoid waiting times
- Optimization of travel times & transports
- Centralized management of all goods flows in a single location

Your Benefits

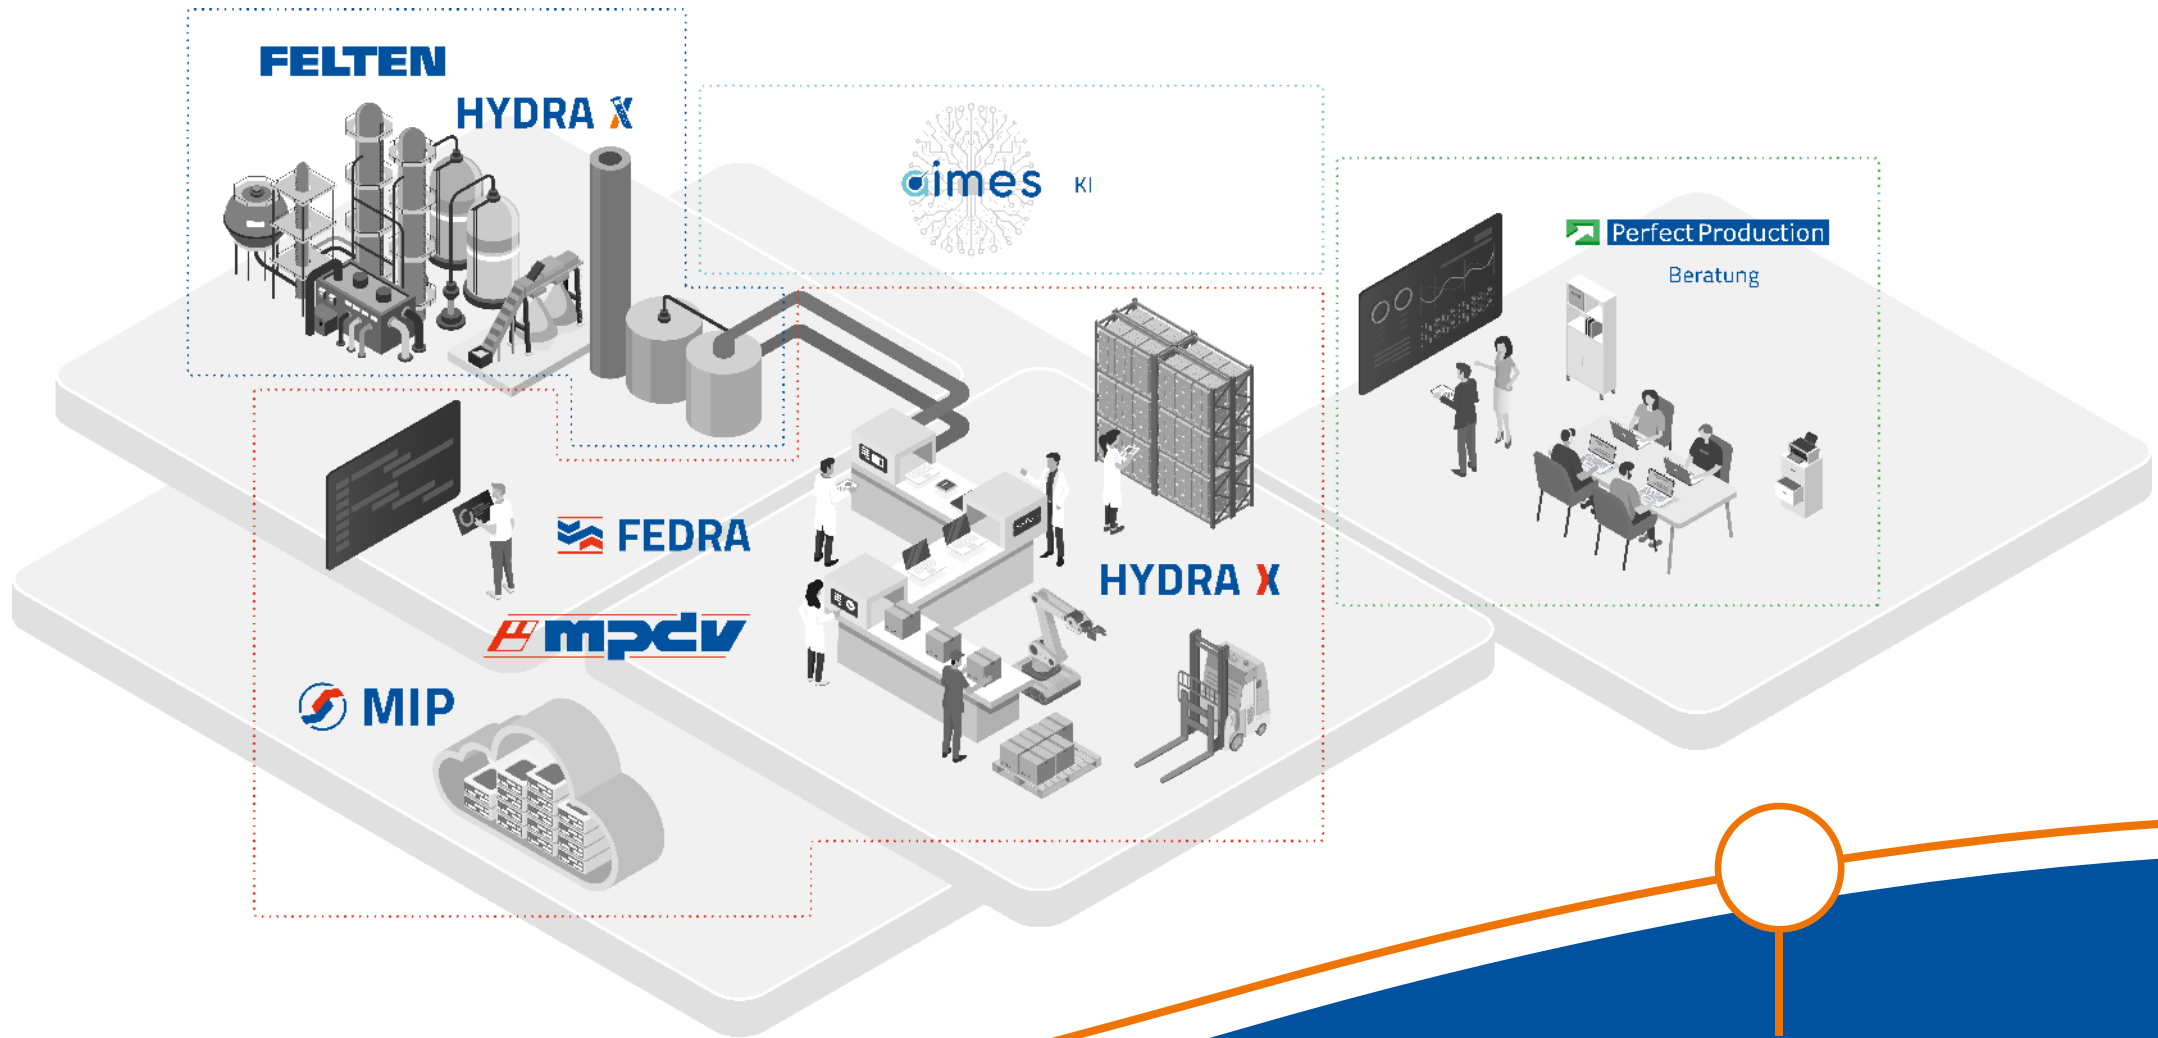

HYDRA X for Process **Provisioning Logistics** enables the efficient **control, optimization** and **tracking** of material movements in production.
